

IN THE CLAIMS

Claim 1. (Currently Amended) A windscreen apparatus for outdoor cooking grills wherein, the wind screen apparatus comprises

a generally continuous rectangular cooking grill base member dimensioned to distinguishably support, fit beneath, and project beyond the outer periphery of an outdoor cooking grill

a rear wall member hingedly connected to said base member wherein, the rear wall member has the same general dimensions as said base member

a pair of side wall members wherein, each side wall member is hingedly connected to a selected one of the rear wall member and the base member.

Claim 2. (Original) The apparatus as in claim 1; wherein, all of the wall members and the base member are fabricated from sheets of fireproof material.

Claim 3. (Original) The apparatus as in claim 1; wherein, all of the wall members and the base member are fabricated from sheets of heat proof material.

Claim 4. (Original) The apparatus as in claim 1; wherein, all of the wall members and the base member are fabricated from sheets of aluminum.

Claim 5. (Original) The apparatus as in claim 1; further comprising
releasable securing means for maintaining all of the wall members in an upright position relative to the base member.

Claim 6. (Original) The apparatus as in claim 1 further including at least one gas line opening associated with one of the wall members.

Claim 7. (Original) The apparatus as in claim 1; wherein, a gas line opening exists between at least one of the side wall members and the base member.

Claim 8. (Original) The apparatus as in claim 5 further including at least one gas line opening associated with one of the wall members.

Claim 9. (Original) The apparatus as in claim 5; wherein, a gas line opening exists between at least one of the side wall members and the base member.

Claims 10-12. (Canceled)

Claim 13. (Re-presented - formerly dependent claim 10) The apparatus as in claim 1; wherein, the height of the rear wall member is greater than the height of each of the side wall members.

Claim 14. (Re-presented - formerly dependent claim 11) The apparatus as in claim 1; wherein, the rear wall member and the base member are provided with alignable handle apertures.
